Smart Thermostats
2/21/19

Smart thermostats provide customers a way to stop cooling their home when it's empty

They make automatic adjustments to help customers save on their bills while maintaining comfort

Foundation of the program was ComEd's Wasted Energy Study

This Shouldn't be that Complicated

EEI - it's not just how much energy customers use, but when they use it

Look at the ComEd usage guide – nothing compares to cooling usage

What we want to do is make this easy for customers

Get customers a smart thermostat and get them signed up for a demand response program
